EMPLOYMENT AND AVERAGE WEEKLY
WAGES AND SALARIES

JANUARY-1968 - ~~DECEMBER~~

Published by Authority of

The Minister of Trade and Commerce

April 1968
8003-501

Price: 40 cents
\$4.00 a year

Vol. 46—No. 1

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$3.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$3.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965 -- Volume I - Price \$4.50
(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES: INDUSTRIAL DIVISIONS—CANADA

JANUARY 1967 — JANUARY 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

JANUARY 1968

Employment

The January unadjusted composite index of employment (1961=100) decreased by 1.5 p.c. from 120.5 in December to 118.6 in January and was 0.3 p.c. lower than in January of last year. Seasonally-adjusted, the index at 123.0 was 0.4 p.c. higher than the comparable figure for December. Among the industry divisions, the largest changes were a decrease of 2.4 p.c. in forestry and an increase of 1.7 p.c. in transportation, communication, and other utilities. Other changes ranged from a decrease of 0.7 p.c. in service to an increase of 1.4 p.c. in construction. Among the regions, only the Atlantic region showed a decrease (0.3 p.c.). Increase in the other regions ranged from 0.1 p.c. in Ontario to 0.9 p.c. in the Prairie Region.

The seasonally-adjusted data appearing in the text have been expanded to include the various components of manufacturing. Other seasonally-adjusted data throughout the publication have been revised. Also, for the first time, data have been published for the Yukon and Northwest Territories.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage Changes from December 1967 in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, January 1968

Industry	Unadjusted for Seasonal Variation

Communication	0.1	- 0.4	- 0.5	- 0.2	- 0.2	- 0.3	- 1.4
Trade	1.2	- 6.5(9)	- 9.8	- 5.1	- 6.7	- 5.8	- 7.7
Finance, insurance and real estate	0.4	0.3	0.1	0.1	0.4	0.6	0.6
Service	- 0.7	- 1.0	- 0.2	- 5.2(10)	0.5	- 0.1	1.4
Industrial composite	0.4	- 1.5	- 3.7	- 1.6	- 1.3	- 1.1	- 1.5
<u>Adjusted for Seasonal Variation</u>							
Industrial composite		0.4	- 0.3	0.7	0.1	0.9	0.5

(1) Relatively few employees in this region. (2) Seasonal layoffs. (3) Seasonal increase. (4) In most components; seasonal. (5) In both components; seasonal. (6) Mainly in highways, bridges, and streets. (7) Seasonal increase and start of new projects in other engineering. (8) In water transport and highway, bridge, and street maintenance. (9) Seasonal layoffs mainly in retail trade. (10) Lay-offs in miscellaneous services.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

AVERAGE WEEKLY WAGES AND SALARIES

At the composite level, average weekly wages and salaries at \$105.70 were \$3.21 higher than in December and \$6.31 higher than in January of last year. All major industry divisions showed increases, the largest being \$18.38 in construction. Other changes ranged from an increase of 55¢ in service to a rise of \$3.46 in mining. All regions showed increases ranging from \$2.85 in Ontario to \$4.40 in the Atlantic Region.

Changes from December 1967 in Selected Series of Average Weekly Wages and Salaries, January 1968

- (1) Relatively few employees in this region.
- (2) Seasonal increase in activity.
- (3) Increased overtime payments and short time last month.
- (4) Seasonal layoffs of lower-paid employees and increased overtime payments in saw, shingle, and planing mills.
- (5) In saw, shingle, and planing mills; increased overtime payments; also short time last month.
- (6) Mainly in metal stamping, pressing, & coating; increased overtime payments and some wage increases.
- (7) In motor vehicles; industrial dispute affecting part of reference week.
- (8) In ship-building and repair; short-time last month.
- (9) Short time last month.
- (10) Short time in other engineering.
- (11) In truck transport; overtime and wage increase; also in railways.

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965 -- Volume I - Price \$4.50
(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

FEBRUARY 1967 - FEBRUARY 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

FEBRUARY 1968

Employment. - The unadjusted composite index of employment (1961=100) decreased by 1.3 p.c. from 119.0 in January to 117.5 in February and was 0.7 p.c. lower than in February of last year. Seasonally-adjusted, the index at 122.3 was 1.0 p.c. lower than the January adjusted index of 123.5. Among the industry divisions, the largest change was recorded in the durables component of manufacturing. The decrease of 3.8 p.c. resulted largely from industrial disputes in transportation equipment. Other changes ranged from a decrease of 1.1 p.c. in mining to an increase of 0.4 p.c. in finance, insurance and real estate. Among the regions, changes ranged from a decrease of 1.7 p.c. in Ontario to an increase of 0.1 p.c. in the Atlantic region.

Average Weekly Wages and Salaries. - At the composite level, average weekly wages and salaries at \$106.99 were 89 cents higher than in January and \$6.14 higher than in February of last year. Among the industry divisions, the largest changes were increases of \$10.39 in forestry, \$2.26 in construction, and \$1.58 in mining. All regions showed increases ranging from 16 cents in the Atlantic to \$2.19 in British Columbia.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage Changes from January 1968 in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, February 1968

<u>Adjusted for Seasonal Variation</u>							
Industrial Composite	- 1.0	0.1	- 0.6	- 1.7	0	- 0.5	

(1) Relatively few employees in this region.

(2) Seasonal lay-offs in logging.

(3) Seasonal lay-offs.

(4) Seasonal increase.

(5) Lay-offs partly due to shutdowns.

(6) Industrial dispute affecting both components of motor vehicles.

(7) Industrial disputes; also some seasonal lay-offs.

(8) Seasonal lay-offs in both components.

(9) In other engineering; partly due to completion of contracts.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

(1) Relatively few employees in this region. (2) Seasonal decline in activity. (3) Increase in hours worked. (4) Seasonal increase in hours worked. (5) More overtime payments this month. (6) Fewer hours worked partly due to shutdowns. (7) Mainly in shipbuilding and repair; fewer overtime payments and an increase in the number of lower paid employees. (8) In motor vehicles; industrial dispute affecting lower paid employees. (9) Seasonal increase in hours worked; includes some overtime hours. (10) Increased average weekly hours. (11) Short time, mainly in other engineering. (12) In both components; seasonal lay-offs of lower paid employees; also some overtime and wage increases.

MARCH 1968

Preliminary estimates indicate that the composite index of employment increased to 118.1 in March from 117.5 in February. The employment index for total manufacturing increased, largely as a result of the settlement of industrial disputes affecting the durable goods component. Increases are indicated for average weekly wages and salaries at the composite level and also in most industry divisions. Further industry and area detail for March other than that given in the table below is not yet available.

Industry	Employment index numbers (1961=100)			Average weekly wages and salaries

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

June 1968
8003-501

Price: 40 cents
\$4.00 a year

Vol. 46—No. 3

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES: INDUSTRIAL DIVISIONS—CANADA

MARCH 1967 — MARCH 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

MARCH 1968

Employment - The unadjusted composite index of employment (1961=100) increased by 0.7 p.c. from 117.1 in February to 117.9 in March and was 0.6 p.c. lower than in March of last year. Seasonally adjusted, the index at 122.4 was 0.4 p.c. higher than the February adjusted index of 121.9. Among the industry divisions, forestry showed an increase of 4.4 p.c., and the durables component of manufacturing showed a 2.0 p.c. increase resulting from the settlement of industrial disputes in transportation equipment. Other changes ranged from a 0.3 p.c. decrease in transportation, communication, and other utilities, to 0.9 p.c. increase in construction. All regions showed increases after seasonal adjustment ranging from 0.1 p.c. in Quebec and British Columbia to 1.4 p.c. in the Atlantic Region.

Average Weekly Wages and Salaries - At the composite level, average weekly wages and salaries at \$107.50 were slightly higher than in February and \$6.52 higher than in March of last year. Among the industry divisions, the largest changes was an increase of \$2.33 in finance, insurance and real estate. Transportation equipment showed a drop of \$7.64 (following the settlement of an industrial dispute in motor vehicles) where employees were recalled only for the latter part of the reference week. All regions showed slight increases.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage changes from last month in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, March 1968

<u>Adjusted for Seasonal Variation</u>							
Industrial Composite		0.5	1.4	0.1	1.0	0.6	0.1

(1) Relatively few employees in this region.

(2) Seasonal.

(3) Return to work following shutdowns last month.

(4) Settlement of industrial disputes; also seasonal increase in shipbuilding and repair.

(5) Settlement of industrial disputes.

(6) Mainly in fish products; seasonal.

(7) In both components.

(8) In other engineering; seasonal.

(9) Mainly in other engineering; seasonal increase.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

(1) Relatively few employees in this region. (2) Mainly in logging. (3) Increased overtime payments. (4) Mainly in iron and steel mills. (5) Increased overtime payments; also some wage increases. (6) Short time last month; also some overtime payments. (7) Partial return to work for only part of reference week following settlement of industrial dispute in motor vehicles. (8) Mainly in fish products; seasonal increase in hours worked including some overtime hours. (9) In other engineering.

APRIL 1968

Preliminary estimates indicate that the composite index of employment increases to 119.5 in April from 117.9 in March. Construction showed the largest increase, while smaller rises occurred in both components of manufacturing. Increases are indicated for average weekly wages and salaries at the composite level and also in most components. Average weekly wages and salaries increased substantially in the durable goods component of manufacturing as a result of longer average hours, wage increases, and overtime following the settlement of industrial disputes.

TABLE 12. Average Weekly Wages and Salaries (in dollars), Urban Areas - Concluded

[illegible]

TABLE 13. Index Numbers of Employment (1961=100), Seasonally - Adjusted and Unadjusted, and Average Weekly Wages and Salaries (in dollars), Yukon and Northwest Territories, Industrial Composite

[illegible]

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

Price: 40 cents
\$4.00 a year

Vol. 46—No. 4

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

INDUSTRIAL COMPOSITE—CANADA PROVINCES AND REGIONS,
AND SELECTED URBAN AREAS

APRIL 1967 — APRIL 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

APRIL, 1968

Employment. - The unadjusted composite index of employment (1961=100) decreased by 0.9 p. c. from 118.0 in March to 119.0 in April and was 0.3 p.c. lower than in April of last year. Seasonally-adjusted, the index at 122.9 was 0.3 p.c. higher than the March adjusted index of 122.6. Among the industry division, the largest changes after seasonal adjustment were an increase of 12.1 p.c. in forestry and a decrease of 1.3 p.c. in construction. Other changes ranged from a decrease of 0.3 p.c. in transportation, communication, and other utilities, to an increase of 1.1 p.c. in the durable goods component of manufacturing. Among the regions, changes ranged from decreases of 0.2 p.c. in Quebec and British Columbia to an increase of 1.8 p.c. in the Atlantic Region.

Average Weekly Wages and Salaries. - At the composite level, average weekly wages and salaries at \$108.97 were \$1.40 higher than in March and \$6.65 higher than in April of last year. The largest change occurred in durables where an increase of \$4.83 resulted from wage increases and overtime following the settlement of industrial disputes in motor vehicles. All regions showed increases, the largest being \$2.57 in Ontario.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

<u>Adjusted for seasonal variations</u>							
Industrial composite		0.3	1.8	- 0.2	0.2	0.5	- 0.2

- (1) Relatively few employees in this region.
- (2) Seasonal layoffs.
- (3) In services incidental to mining; seasonal layoffs.
- (4) Seasonal increase in shipbuilding and repair.
- (5) In motor vehicles; return to full employment following settlement of industrial disputes.
- (6) Seasonal increase in fish products.
- (7) Mainly in special trade contractors; seasonal.
- (8) Mainly in general contractors; seasonal.
- (9) Mainly in highways, bridges and streets; seasonal.
- (10) In both components; seasonal.
- (11) Opening of navigation season in water transport and services.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

(1) Relatively few employees in this region. (2) Short time this month. (3) Increased overtime payments and some wage increases; also industrial disputes affecting lower paid employees. (4) In motor vehicles; return to work with overtime and wage increases following settlement of industrial disputes. (5) Short time last month due to industrial dispute; also some overtime payments this month. (6) Mainly in general contractors; seasonal. (7) In both components; fewer hours worked. (8) Mainly in other engineering; fewer hours worked and seasonal increase in lower paid employees. (9) In both components; seasonal.

MAY 1968

Preliminary estimates indicate that the composite index of employment increased to 121.8 in May from 119.0 in April. All industry divisions showed increases, the largest being in mining, construction, and service. In these three industries, decreases were recorded in average weekly wages and salaries, probably reflecting a seasonal increase in lower paid employees. At the composite level, average weekly wages and salaries showed a slight increase. Further industry and area detail other than that given in the table below is not yet available.

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

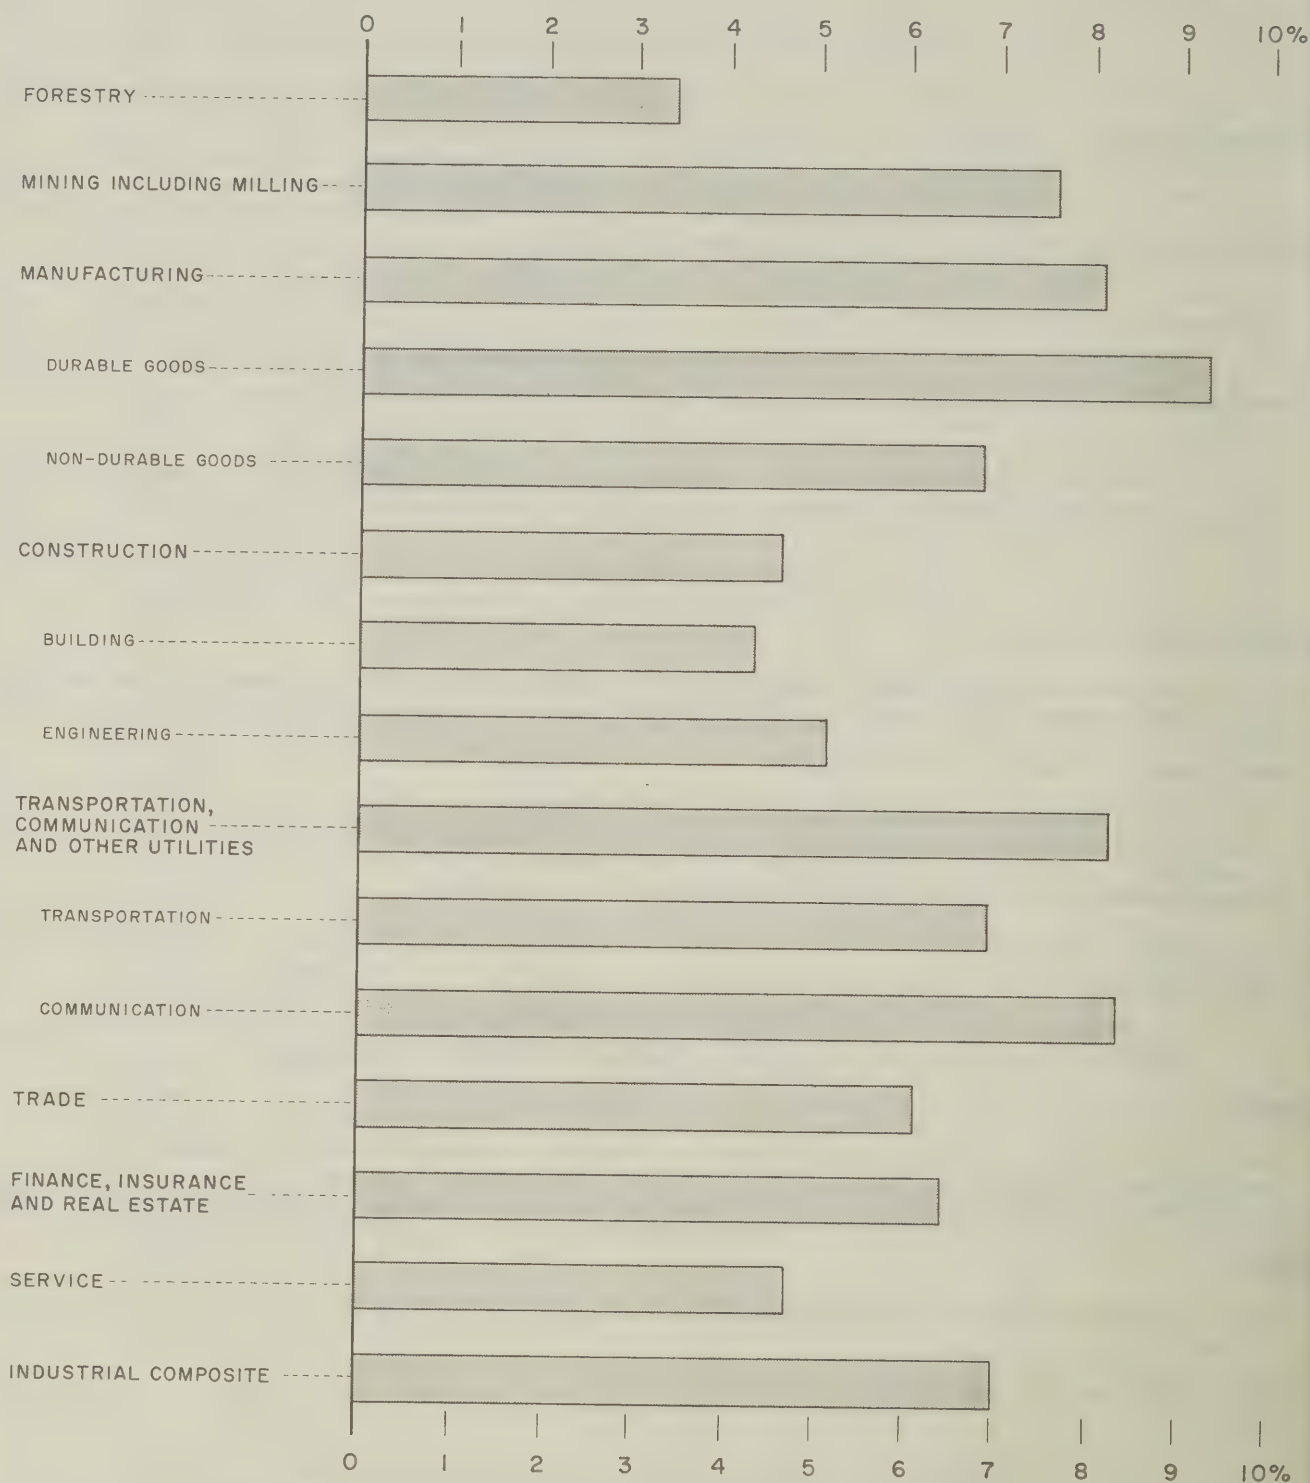

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES: INDUSTRIAL DIVISIONS—CANADA

MAY 1967—MAY 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

MAY 1968

Employment. - The unadjusted composite index of employment (1961=100) increased by 2.7 p.c. from 119.3 in April to 122.5 in May and showed virtually no change from May of last year. Seasonally-adjusted, the index at 122.7 was 0.6 p.c. lower than the April adjusted index of 123.4. Among the industry divisions, the largest changes after seasonal adjustment were decreases in construction (2.8 p.c.), and transportation, communication, and other utilities (1.1 p.c.). Other changes ranged from a decrease of 0.6 p.c. in the non-durables component of manufacturing to an increase of 0.6 p.c. in forestry. Among the regions, British Columbia showed an increase of 0.5 p.c. All other regions showed decreases ranging from 0.2 p.c. in Quebec to 2.2 p.c. in the Atlantic Region.

Average Weekly Wages and Salaries. - At the composite level, average weekly wages and salaries at \$109.35 were slightly higher than in April and \$6.16 higher than in May of last year. The largest change was in forestry where a decrease of \$9.18 was recorded. Other changes were slight. Among the regions, the Atlantic showed a decrease of \$1.30. Increases were recorded in all other regions.

<u>Adjusted for seasonal variation</u>							
Industrial composite		- 0.4	- 2.2	- 0.2	- 0.2	- 1.3	0.5

- (1) Relatively few employees in this region.
- (2) Seasonal increase.
- (3) In saw, shingle and planing mills; termination of industrial disputes; also seasonal increase.
- (4) Mainly in shipbuilding and repair.
- (5) In fish products; seasonal.
- (6) In fish products and fruit and vegetable canners and preservers; seasonal.
- (7) In both components; seasonal.
- (8) Mainly in highways, bridges and streets; seasonal.
- (9) In water transport and services and railway transport; seasonal.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

(1) Relatively few employees in this region. (2) Seasonal increase in lower paid employees; also fewer overtime payments this month. (3) Seasonal increase in lower paid employees. (4) Mainly in synthetic textiles; increased overtime payments and some wage increases. (5) Mainly in pulp and paper mills; seasonal increase in lower paid employees; also industrial dispute affecting part of reference week. (6) In both components; seasonal increase in lower paid employees; also some short time. (7) Increased overtime payments. (8) In both components; short time last month; overtime this month.

June 1968

Preliminary estimates indicate that the composite index of employment increased to 124.8 in June from 122.5 in May. All industry divisions showed increases, the largest being in forestry and construction. Average weekly wages and salaries, at the composite level, showed a very slight decrease. Among the industry divisions, forestry showed a substantial increase. Other changes were slight. Further industry and area detail other than that given in the table below is not yet available.

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in the monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

Larger Firm Employment as a Percentage of Total Estimated Employment, by Industry Division,

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I -- Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES;
INDUSTRIAL COMPOSITE—CANADA, PROVINCES AND REGIONS,
AND SELECTED URBAN AREAS

JUNE 1967 — JUNE 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

JUNE 1968

Employment - The unadjusted composite index of employment (1961 = 100) increased by 1.5 p.c. from 122.7 in May to 124.5 in June and was 1.0 p.c. lower than in June of last year. After adjustment for seasonal variation, the composite index at 121.3 was 1.4 p.c. lower than last month, and all industry divisions showed decreases from May to June except finance, insurance and real estate, which was unchanged. The largest declines were recorded in forestry (12.3 p.c.), mining (3.1 p.c.) and construction (2.7 p.c.). All regions showed decreases, ranging from 1.2 p.c. in the Prairie Region to 2.1 p.c. in the Atlantic Region.

Average Weekly Wages and Salaries - At the composite level, average weekly wages and salaries at \$109.89 were \$0.50 higher than in May and \$6.93 higher than in June of last year. The largest change over the month was in forestry where an increase of \$7.40 was recorded. All regions showed higher average weekly wages and salaries than in May except Quebec, where a slight decrease occurred. Compared with June 1967, the Prairie Region recorded the largest increase (\$8.13).

Industrial composite	- 1.4	- 2.1	- 1.3	- 1.5	- 1.2	- 1.3	

- (1) Relatively few employees in this region.
- (2) Seasonal increases in logging.
- (3) Increased activity in shipbuilding and repairing.
- (4) Some layoffs in motor vehicles.
- (5) In fish products - seasonal.
- (6) In fish products and fruit and vegetable canners and preservers.
- (7) Mainly in highways, bridges and streets - seasonal.
- (8) In both components.
- (9) Seasonal increase in highway and bridge maintenance.
- (10) Mainly in hotels restaurants and taverns - seasonal.

Note: Statistics are based on returns received from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

- (1) Relatively few employees in this region
- (2) In logging.
- (3) Increase in hours worked.
- (4) Overtime payments in shipbuilding and repairing.
- (5) Fewer overtime payments this month in shipbuilding and repairing.
- (6) Overtime payments last month, some short time this month in motor vehicles.
- (7) Seasonal increase of lower paid employees in fish products.
- (8) Wage increase and heavy overtime payments in pulp and paper mills.
- (9) Reduction in hours worked, some unpaid holidays in special trade contractors.
- (10) In both components - more hours worked, overtime payments.

July 1968

Preliminary estimates indicate that the composite index of employment decreased to 121.4 in July from 124.5 in June. Among the industry divisions, the durable goods component of manufacturing showed a seasonal drop associated with the model change-over in the automotive industry. Large industrial disputes in transportation, communication, and other utilities and trade contributed to the decline in the composite index. At the composite level, average weekly wages and salaries increased from \$109.89 in June to \$111.89 in July. Further industry and area detail other than that presented in the table below is not yet available.

	Employment index numbers (1961=100)			Average weekly wages and salaries

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

EMPLOYMENT AND AVERAGE WEEKLY
WAGES AND SALARIES

JULY 1968

Published by Authority of
The Minister of Trade and Commerce

October 1968
8003-501

Price: 30 cents
\$3.00 a year

Vol. 46—No. 7

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES; INDUSTRIAL DIVISIONS-CANADA

JULY 1967 - JULY 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

JULY 1968

Employment - The unadjusted composite index of employment (1961 = 100) decreased by 0.8 per cent from 124.6 in June to 123.6 in July and was 1.7 per cent lower than in July of last year. Seasonally-adjusted, the July index at 120.5 was 0.7 per cent lower than the June index of 121.4. Among the industry divisions, the largest decreases after seasonal adjustment were recorded in forestry (5.4 per cent), construction (2.1 per cent), and transportation, communication and other utilities (4.0 per cent). The decline in communication affected all regions and can be attributed to the industrial dispute among the post office employees. Manufacturing showed an increase after seasonal adjustment. All regions showed decreases ranging from 0.2 per cent in Ontario to 1.9 per cent in the Prairie Region.

Average Weekly Wages and Salaries - At the composite level, average weekly wages and salaries at \$109.83 were slightly lower than in June and \$6.48 higher than in July of last year. Changes ranged from an increase in construction of \$2.71 to a decrease in forestry of \$2.34. Among the regions, the largest change was a decline of 79 cents in British Columbia.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage Changes from last month in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, July 1968

Industrial composite		- 0.7	- 1.0	- 0.9	- 0.2	- 1.9	- 1.6

(1) Relatively few employees in this region.

(2) Seasonal increase.

(3) Mainly in saw, shingle and planing mills; some industrial disputes.

(4) Mainly in motor vehicles; seasonal layoffs associated with model changeover.

(5) Mainly in fish products; also in fruit and vegetable canners and preservers; seasonal.

(6) Seasonal increase; also return to work following some industrial disputes last month.

(7) In highways, bridges and streets.

(8) Industrial dispute involving post office employees.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

- (1) Relatively few employees in this region.
- (2) Increase of lower paid employees.
- (3) Overtime last month; short time this month.
- (4) Short time this month.
- (5) Overtime, wage increases and some bonuses.
- (6) Mainly in fish products; short time last month; overtime this month.
- (7) Short time last month; overtime this month.
- (8) Increase in hours worked following short time last month; some overtime this month.
- (9) Fewer overtime payments this month.
- (10) Increased overtime payments this month.
- (11) Industrial dispute affecting lower paid postal workers.

August 1968

Preliminary estimates indicate that the composite index of employment increased to 125.4 in August from 123.6 in July. Most industry divisions showed increases. The manufacturing index rose substantially as workers returned following last month's layoffs associated with the model changeover in motor vehicles. The termination of an industrial dispute affecting the post offices contributed to the increase in the composite index. At the composite level, average weekly wages and salaries showed an increase of \$1.34. Service and trade showed slight declines while all other industry divisions showed increases. Further industry and area detail other than that shown in the table below is not yet available.

	Employment index numbers (1961=100)			Average weekly wages and salaries		
	August 1968	July 1968	August 1967	August 1968	July 1968	August 1967

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

Larger Firm Employment as a Percentage of Total Estimated Employment, by Industry Division,

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES;
INDUSTRIAL COMPOSITE—CANADA, PROVINCES AND REGIONS,
AND SELECTED URBAN AREAS

AUGUST 1967—AUGUST 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

AUGUST 1968

Employment - The unadjusted composite index of employment (1961=100) increased by 2.0 per cent from 124.0 in July to 126.5 in August and was 0.4 per cent lower than in August of last year. Seasonally-adjusted, the index at 121.7 was 0.7 per cent higher than the July index of 120.8; among the industry divisions, service and mining both showed decreases of 1.5 per cent. The largest increase (4.9 per cent) was recorded in transportation, communication, and other utilities largely as a result of the termination of the Canada-wide dispute affecting the postal workers. All regions showed increases ranging from 0.2 per cent in British Columbia to 1.3 per cent in the Prairie Region.

Average Weekly Wages and Salaries - At the composite level, average weekly wages and salaries at \$110.90 were 97 cents higher than in July and \$7.24 higher than in August of last year. Among the industry divisions, trade showed a slight decrease. The largest increases were recorded in forestry (\$2.43) and mining (\$2.45). All regions showed increases, the largest being a rise of \$1.28 in Quebec. The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage Changes from last month in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, August 1968

(1) Relatively few employees in this region.

(2) Mainly in metals; some industrial disputes.

(3) Industrial disputes.

(4) Termination of industrial disputes in aircraft & parts; also return to work following layoffs associated with model changeover in motor vehicles.

(5) Mainly in fruit & vegetable canners and preservers; seasonal.

(6) Seasonal increase.

(7) Seasonal increase.

(8) Mainly in other engineering.

(9) In other engineering; seasonal.

(10) Termination of nation-wide industrial dispute affecting postal workers.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

Industry division and area	Index numbers						Average weekly wages and salaries			Employees reported August 1968
	Employment			Payrolls						
	Aug. 1968	July 1968	Aug. 1967	Aug. 1968	July 1968	Aug. 1967	Aug. 1968	July 1968	Aug. 1967

- (1) Relatively few employees in this region.
- (2) Layoffs of lower paid employees; also some overtime.
- (3) Short time last month; some overtime this month.
- (4) Overtime payments and bonuses.
- (5) Overtime and wage increases in aircrafts and parts, shipbuilding and repairing; short time last month in motor vehicles.
- (6) In most components; fewer overtime payments this month.
- (7) In shipbuilding and repairing; overtime last month, short time this month.
- (8) Mainly in special trade contractors; increased overtime payments; some short time last month.
- (9) In general contractors; short time due to job completions and weather conditions.
- (10) Layoffs of lower paid employees; also some overtime payments.
- (11) In other engineering; fewer overtime payments.
- (12) Wage increase following return to work of postal workers.

September 1968

Preliminary estimates indicate that the composite index of employment decreased slightly from 126.5 August to 126.1 in September. Most industries showed decreases. Total manufacturing remained unchanged while trade showed an increase. Average weekly wages and salaries at the composite level increased with most industry divisions contributing to the rise. Further industry and area detail than that given in the table below is not yet available.

	Employment index numbers (1961=100)			Average weekly wages and salaries

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I -- Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

CHARTS

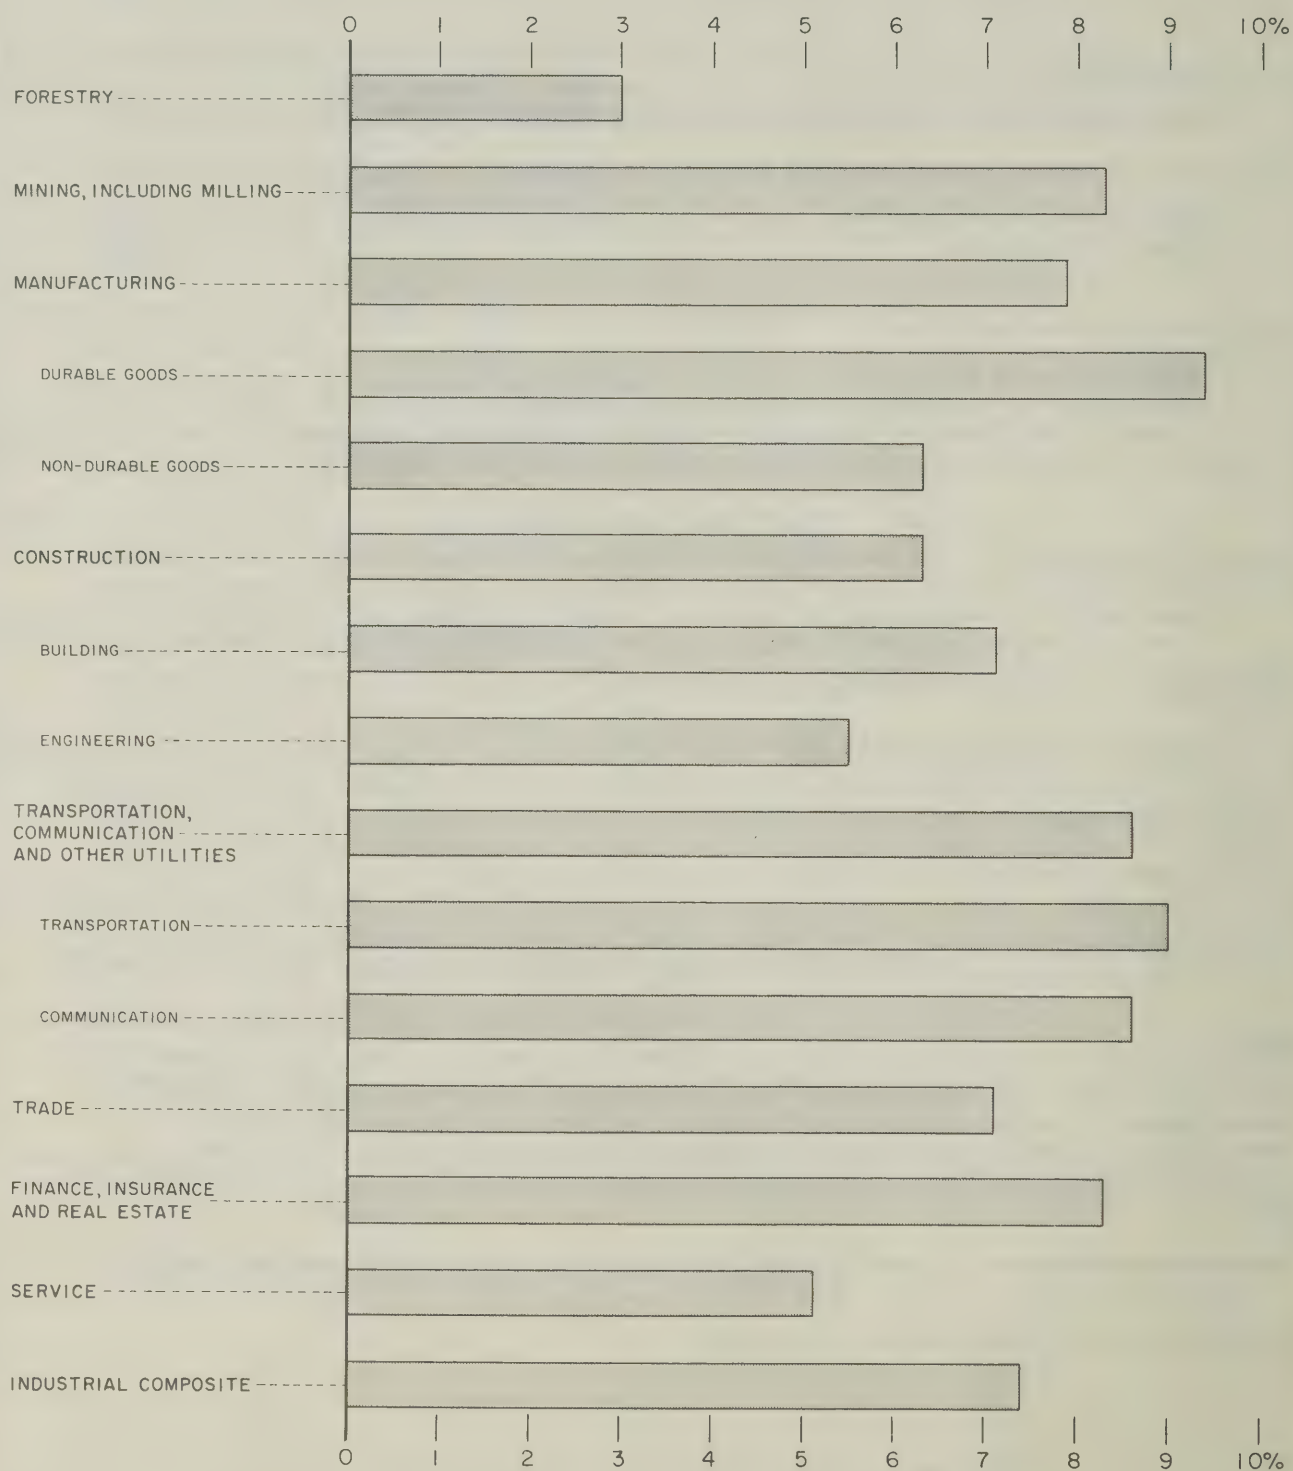

Year-to-year Changes in Average Weekly Wages and Salaries; Industrial Divisions, Canada	4
Index Numbers of Employment, Seasonally-adjusted and Unadjusted-by Industry Division	40
Index Numbers of Employment, Seasonally-adjusted and Unadjusted-Regions and Provinces	42

METHODS

Note on methods and scope of Monthly surveys of Employment and Average Weekly Wages and Salaries	i
--	---

(1) 1965, 1966 and 1967 are subject to revision.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES;
INDUSTRIAL DIVISIONS—CANADA
SEPTEMBER 1967 — SEPTEMBER 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

SEPTEMBER 1968

Employment. - The unadjusted index of employment (1961 = 100) at the industrial composite level was 126.6 in September 1968 representing a decrease of 0.3 p.c. over August 1968. The index was 0.7 p.c. higher in a year-over-year comparison. Seasonally adjusted, the composite index at 122.8 increased by 0.6 p.c. over August 1968. Services increased 3.6 p.c. while mines, quarries and oil wells, manufacturing and transportation, communication and other utilities showed smaller increases. A decrease of 4.9 p.c. was recorded in forestry and smaller decreases in the remaining industries. At the industrial composite level, British Columbia, Ontario, the Prairie Provinces and Quebec showed increases ranging from 1.5 p.c. in British Columbia to 0.1 p.c. in Quebec.

Average Weekly Wages and Salaries. - Average weekly wages and salaries at the composite level increased to \$112.43 This was \$1.51 and \$7.66 higher than in August 1968 and September 1967, respectively. Increases were recorded in all industry divisions with the larger changes in manufacturing (\$2.53); construction (\$2.47), mines, quarries and oil wells (\$2.12), forestry (\$1.72) and transportation, communication and other utilities (\$1.72). All regions showed increases with the largest change in Ontario (\$1.85).

The footnotes to the tables below indicate some of the main factors influencing the larger variations from last month in the unadjusted indexes.

Percentage Changes from last month in Selected Series of Seasonally-adjusted and

(1) Relatively few employees in this region.

(2) Seasonal decrease.

(3) Seasonal decrease and industrial disputes.

(4) Return to work following the model change-over in motor vehicles.

(5) Seasonal lay-off in fish products.

(6) In both components.

(7) Seasonal lay-off in highway and bridge maintenance.

(1) Relatively few employees in this region.

(2) More hours worked.

(3) Heavy overtime payments in motor vehicles.

(4) Reduced hours in ship-building and repair.

(5) More workers and more hours worked in building and special trade contractors.

(6) Lay-off in other engineering where wages are above the industry average.

(7) Seasonal lay-off of lower paid employees.

October 1968

Preliminary estimates indicate a slight drop in the composite index of employment from September to October. Forestry and construction showed the largest declines. Smaller declines were recorded in both the durables and non-durables components of manufacturing. Average weekly wages and salaries showed little change at the composite level. The largest increases were recorded in mining and finance, insurance and real estate while construction showed the largest decline.

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

Larger Firm Employment as a Percentage of Total Estimated Employment, by Industry Division,

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

OCTOBER 1967 — OCTOBER 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

OCTOBER 1968

Employment - The unadjusted composite index of employment (1961=100) decreased by 0.6 per cent from 126.7 in September to 125.9 in October and was 0.9 per cent higher than in October of last year. Seasonally-adjusted, the October index at 123.5 was 0.7 per cent higher than the September index of 123.0. Among the industry divisions, the largest increase after seasonal adjustment was in service (1.3 per cent). No changes was recorded in the durables component of manufacturing while non-durables showed a 0.6 per cent increase. Slight decreases were recorded in forestry and construction. Increases were recorded in all regions except Quebec which showed a slight decline.

Average weekly wages and salaries - At the composite level, average weekly wages and salaries in October at \$112.83 were slightly higher than in September and were \$7.73 higher than in October of last year. Among the industry divisions, mining showed an increase of \$1.67 while the non-durable component of manufacturing increased by \$1.27. The largest decrease was recorded in construction (\$1.54). All regions except the Atlantic Region showed slight increases.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

<u>Adjusted for seasonal variation</u>							
Industrial composite		0.7	0.4	- 0.2	0.7	0.9	0.8

- (1) Relatively few employees in this region.
- (2) Seasonal layoffs.
- (3) Mainly in iron and steel mills.
- (4) Mainly in fish products; seasonal layoffs.
- (5) Mainly in fruit and vegetable canners and preservers; seasonal layoffs.
- (6) In fish products and fruit and vegetable canners and preservers; seasonal layoffs.
- (7) In both components; seasonal
- (8) Mainly in general contractors; seasonal layoffs; also some industrial disputes.
- (9) Mainly in highways, bridges, and streets.
- (10) In most components.
- (11) Mainly in department stores; seasonal increase.
- (12) Seasonal layoffs in hotels, restaurants, and taverns; also seasonal layoff of employees of Terre des Hommes.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

- (1) Relatively few employees in this region.
- (2) Seasonal layoffs of lower paid employees.
- (3) Mainly in metals; short time last month; overtime this month. Also some wage increases.
- (4) Layoffs of lower paid employees; overtime for remaining employees.
- (5) Increased overtime payments this month.
- (6) Mainly in shipbuilding and repair; short time last month; overtime this month.
- (7) Mainly in fish products; seasonal short time.
- (8) Mainly in fruit and vegetable canners and preservers; seasonal layoffs of lower paid employees.
- (9) Seasonal increase in hours worked.
- (10) In pulp and paper mills; wage increases and some overtime.
- (11) In both components; short time partly due to industrial disputes; also some seasonal short time.
- (12) Fewer overtime payments this month.
- (13) In other engineering.
- (14) In highways, bridges, and streets; seasonal short time.

November 1968

Preliminary estimates indicate a drop in the industrial composite index of employment in November 1968. Forestry, construction, service, and the non-durables component of manufacturing all contributed to the decline. Average weekly wages and salaries at the composite level showed a slight rise. Construction showed no change, while all other industry divisions showed increases, the largest being in forestry. Further industry and area detail other than that given in the accompanying table is not yet available.

Industry	Employment index numbers (1961=100)			Average weekly wages and salaries		
	November 1968	October 1968	November 1967	November 1968	October 1968	November 1967

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I -- Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

PERCENTAGE CHANGES IN AVERAGE WEEKLY WAGES AND SALARIES; INDUSTRIAL DIVISIONS—CANADA

NOVEMBER 1967 — NOVEMBER 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

NOVEMBER 1968

Employment. - The unadjusted composite index of employment (1961 = 100) decreased by 0.3 per cent from 126.0 in October to 125.6 in November and was 1.0 per cent higher than in October of last year. Seasonally-adjusted, the November index at 123.9 was 0.4 per cent higher than the October index of 123.4. Among the industry divisions the largest change was a 5.8 per cent decrease in forestry. Construction showed an increase of 1.3 per cent with most other industries showing smaller rises. All regions showed increases except the Atlantic where no change was recorded.

Average Weekly Wages and Salaries. - At the composite level, average weekly wages and salaries in November at \$113.46 showed little change from October and were \$8.20 higher than in November, 1967. Among the industry divisions, the largest increases occurred in forestry (\$7.69), mining (\$2.10), service (\$1.45), and finance, insurance and real estate (\$1.16). All regions except Ontario showed increases, the largest being \$1.58 in British Columbia.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage Changes from Last Month in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, November 1968

- (1) Relatively few employees in this region
- (2) Greater than seasonal layoffs.
- (3) Mainly in saw, shingle and planing mills; seasonal.
- (4) Termination of industrial dispute.
- (5) Seasonal layoffs.
- (6) Mainly in shipbuilding and repair.
- (7) In fish products; seasonal.
- (8) In fruit and vegetable canners and preservers; seasonal.
- (9) Mainly in general contractors; seasonal
- (10) In both components; seasonal.
- (11) Mainly in highways, bridges and streets; seasonal.
- (12) Seasonal layoffs in hotels, restaurants and taverns.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

- (1) Relatively few employees in this region.
- (2) Layoffs of lower paid employees.
- (3) Layoffs of lower paid employees; some overtime worked by remaining employees.
- (4) More hours worked this month; also some wage increases.
- (5) In most components.
- (6) Fewer hours worked this month; also termination of industrial dispute affecting lower paid employees.
- (7) Short-time last month.
- (8) Fewer overtime payments this month.
- (9) Some overtime payments.
- (10) More hours worked this month; also more bonuses.
- (11) In both components; short time last month; some overtime this month; also some layoffs of lower paid employees.
- (12) Short time last month; overtime this month.

December 1968

Preliminary estimates indicate a drop in the composite index of employment from November to December 1968. Construction and manufacturing showed significant declines, resulting generally from layoffs associated with the holiday season. Forestry also declined sharply and service was down as well. At the composite level, average weekly wages and salaries showed a decrease mainly as a result of short time in the industries indicated above. Further industry and area detail other than that presented in the accompanying table is not yet available.

	Employment index numbers (1961=100)			Average weekly wages and salaries		
	December 1968	November 1968	December 1967	December 1968	November 1968	December 1967

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together in some tables to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

Larger Firm Employment as a Percentage of Total Estimated Employment, by Industry Division,
for Canada and Provinces, 1966 Annual Averages(1)

Industry	Canada	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.

EMPLOYMENT AND AVERAGE WEEKLY
WAGES AND SALARIES

DECEMBER 1968

Published by Authority of
The Minister of Trade and Commerce

March 1969
8003-501

Price: 40 cents
\$4.00 a year

Vol. 46—No. 12

EMPLOYMENT AND PAYROLL REPORTS

Following are publications of the Labour Division based upon establishment data in the field of industrial employment, payrolls and hours:

- 72-001 - Advance Statement on Employment and Average Weekly Wages and Salaries - Monthly - Price \$1.00 per year
(Index numbers of employment and averages of weekly wage and salary statistics for Canada (major industry divisions) and the provinces (industrial composite figures)).
- 72-002 - Employment and Average Weekly Wages and Salaries - Monthly - Price \$4.00 per year
(Industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material).
- 72-003 - Man-Hours and Hourly Earnings - Monthly - Price \$4.00 per year
(Industry and area averages of hours per week, hourly and weekly wages, with comparisons from a month and a year earlier, and certain historical comparisons; charts and explanatory material).
- 72-005 - Estimates of Labour Income - Monthly - Price \$2.00 per year
(Monthly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1954).
- 72-008 - Estimates of Employees by Province and Industry - Monthly - Price \$1.00 per year
(Estimates of total numbers of employees, with comparisons with a month and a year earlier).
- 72-201 - Review of Employment and Average Weekly Wages and Salaries - Annual - Price \$1.00
(Industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material).
- 72-202 - Review of Man-Hours and Hourly Earnings - Annual - Price 75 cents
(Industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material).
- 72-204 - Earnings and Hours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(Separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in October from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years).
- 72-502 - Labour Income, 1926-58 - Price 75 cents
(A complete record of annual estimates of labour income from 1926, along with monthly figures from 1947; contains explanations of sources, methods and concepts).
- 72-503 - Estimates of Employees by Province and Industry, 1961-64 - Price 50 cents
(Estimates of total numbers of employees, monthly and annually, for major industrial divisions, Canada and provinces; contains a review of concepts, sources and methods and indicators of sampling variability).
- 72-504 - Employment Indexes, Average Weekly Wages and Salaries, Average Weekly Hours and Average Hourly Earnings, Monthly and Annual Statistics -- Historical Series, January 1961 - May 1965
-- Volume I - Price \$4.50

(This volume gives statistics revised to the 1960 Standard Industrial Classification and a 1961 time base for index numbers).

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Dominion Bureau of Statistics, or to the Queen's Printer, Ottawa, Canada.

INDUSTRIAL COMPOSITE—CANADA, PROVINCES AND REGIONS,
AND SELECTED URBAN AREAS

DECEMBER 1967—DECEMBER 1968

EMPLOYMENT AND AVERAGE WEEKLY WAGES AND SALARIES

DECEMBER 1968

Employment. - The unadjusted composite index of employment (1961=100) decreased by 2.4 per cent from 125.7 in November to 122.7 in December and was 1.8 per cent higher than in December of last year. Seasonally adjusted, the December index at 124.7 was 0.5 per cent higher than the November index of 124.1. Among the industry divisions, the largest change in the adjusted figures was a decrease of 4.2 per cent in forestry. Construction increased by 1.2 per cent and the durables component of manufacturing showed a 1.1 per cent rise. All regions showed increases, the largest being 1.6 per cent in British Columbia.

Average Weekly Wages and Salaries. - Average weekly wages and salaries at the composite level declined by \$3.22 from \$113.37 in November to \$110.15 in December. Several industrial divisions showed fairly sizable decreases as a result of short-time associated mainly with the holiday season. The largest declines were in construction (\$22.14), forestry (\$8.42), the durables component of manufacturing (\$6.06), and mining (\$3.37). All regions showed decreases ranging from \$1.65 in the Atlantic Region to \$4.57 in British Columbia.

The footnotes to the tables below indicate some of the main factors underlying the larger variations from last month in the unadjusted indexes.

Percentage Changes from last month in Selected Series of Seasonally-adjusted and
Unadjusted Employment Index Numbers, December 1968

Industry	Seasonally adjusted	Unadjusted for seasonal variation					
	Canada	Canada	Atlantic Region	Quebec	Ontario	Prairie Region	British Columbia

Finance, insurance and real estate	0.6	0.2	0.5	0.4	0	0	0.4
Service	- 0.1	- 3.0	- 5.0(11)	- 2.7	- 4.0(11)	- 1.4	- 1.7
Industrial composite	0.5	- 2.4	- 3.8	- 3.3	- 1.9	- 2.2	- 1.7
<u>Adjusted for seasonal variation</u>							
Industrial composite		0.5	0.9	0.2	0.5	0.5	1.6

- (1) Relatively few employees in this region.
- (2) Seasonal layoffs and reduced activity partially due to year-end holiday season.
- (3) Temporary layoffs and shutdowns mainly due to holiday season.
- (4) Mainly in saw, shingle & planing mills.
- (5) Mainly seasonal layoffs.
- (6) Mainly in fish products; seasonal.
- (7) In several components; seasonal decrease in activity; some layoffs associated with holiday season.
- (8) In fish products and fruit and vegetable canners and preservers; seasonal.
- (9) In both components; seasonal; also industrial dispute in other engineering.
- (10) Mainly in water transport and services.
- (11) Seasonal layoffs in several components.

Note: Statistics are based on returns from employers having 20 or more employees in any month of the year. These returns include data for the last pay period(s) of reporting establishments in each month. The latest figures throughout this publication are subject to revision.

TABLE 1. Summary Statistics of Employment, Payrolls and Average Weekly Wages and Salaries

- (1) Relatively few employees in this region.
- (2) Decrease in activity this month partly due to year end holiday season.
- (3) Mainly in saw, shingle, and planing mills; short-time this month.
- (4) Mainly seasonal short-time.
- (5) Mainly in shipbuilding and repairing; short-time due mainly to holiday season.
- (6) Mainly in motor vehicles; overtime last month; short-time this month; partly due to holiday season.
- (7) Seasonal layoffs in canning where rates are below industry average.
- (8) In most components; fewer hours worked this month.
- (9) Mainly in pulp and paper mills; overtime payments and wage increases.
- (10) Short-time this month.
- (11) Mainly overtime payments.

January 1969

Preliminary estimates indicate that the composite index of employment declined in January due mainly to seasonal decreases in forestry, construction, and trade. Average weekly wages and salaries at the composite level increased mainly as a result of an increase in the number of hours worked following short-time associated with the holiday season in December. Mining, manufacturing and construction were most noticeably affected. Further industry and area detail other than that given in the accompanying table is not yet available.

	Employment index numbers (1961=100)			Average weekly wages and salaries		
	January 1969	December 1968	January 1968	January 1969	December 1968	January 1968

NOTES

Each month the Employment Section collects from its reporting units data on the number of paid employees and their payrolls, on the number of wage-earners for whom a record of hours is kept and their hours and earnings, and on the number of female employees. The wage-earner data are published in a monthly report "Man-Hours and Hourly Earnings", Catalogue No. 72-003. The data relate to a reference period, conceptually the last seven days of the month. In a monthly tabulation the data are grouped into industrial and geographic units.

The Reporting Unit

The reporting unit is the establishment, that is, the smallest industrial unit which is a separate operating entity capable of reporting all elements of basic industrial statistics including information on inputs and outputs needed to calculate "value added" or "gross mark-up" or "gross profit" as well as the related data on employment and payrolls. For purposes of urban area statistics, the Employment Section may request separate reports from parts of an establishment located in different urban centres.

Monthly reports are requested from establishments in the following industry divisions: forestry; mining, including milling; manufacturing; construction; transportation, communication and other utilities; trade; finance, insurance and real estate; and parts of service.

The survey covers larger firms only, that is, firms having 20 or more employees in any month of the year. Thus all the establishments of a multiple establishment firm are included if the firm had 20 or more employees in total in any month of the year even though any particular establishment may have only a few employees. This size criteria results in approximately the same coverage as did the "usually employing 15 or more" criteria that was formerly used.

Coverage

The limitation of surveys to larger firms results in a large and relatively even coverage of total employment in the surveyed industry divisions in most provinces and urban areas. The industrial representation, though large, is more uneven; the proportion of employees covered depends on the organization of particular industries into larger or smaller establishments.

The table at the end of the notes shows annual employment in the survey as a percentage of the estimated total employment, the latter being estimated by adding together data from the employment and payrolls survey and data from a sample survey of smaller firms. A report on the total employment estimates is published monthly by the Employment Section, "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

It is important to note that the statistics in the "Employment and Average Weekly Wages and Salaries" report itself do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distribution of men and women on the staffs of the co-operating employers in the reference period.

Definitions

Reference Period

The figures refer to the last seven days in the specified months. In practice, few establishments keep payroll records covering precisely this period and establishments are therefore permitted to report for their last pay period or pay periods in each month.

When the reported pay period is longer than one week, the payroll data are reduced to one week's proportion of the totals. The numerators of the fractions used in calculating these weekly equivalents are 5, 6 or 7 depending on the number of working days per week in which the establishment operated in the pay period. The denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. When a holiday, layoff or industrial dispute occurs in an establishment that reports a pay period that is different from the last week of the month, an adjustment is made to the data if the holiday, layoff or dispute affects the two periods differently.

The use of the last pay period in the month reduces double counting of individuals who work for more than one establishment in a period of several weeks. The Quebec forestry industry is an exception in that the turnover of wood workers paid on a monthly basis is high. Consequently this group reports on a special questionnaire which has an additional question on the average number of employees in the last week of the month.

Employees

The survey covers all wage-earners and salaried employees of reporting establishments who are paid for rendering current services or are on paid absence during the reference period except for casual employees working less than the equivalent of one full day in the pay period. Regular part-time employees are included. The employee concept excludes proprietors, directors and firms members including those who are actively engaged in the operation of the firm, pensioners, home-workers and persons providing services to an establishment on the basis of a contract for services.

Employees not receiving pay for any time during the reference period are excluded. For example, workers on strike during the reported pay period, or laid off as a consequence of a strike, are not included in the data unless they work part of the week or draw pay from their employers (e.g., unless they take paid vacations during the dispute). The exclusion of persons affected by industrial dispute is one of the main sources of irregular fluctuation in the series.

Payrolls

The payrolls of reported employees are covered. These are gross payments before deductions are made for taxes, unemployment insurance, etc. Included are salaries, straight-time wages, over-time wages, cost-of-living allowances, commissions, payments to persons absent because of holidays, vacations, sickness, etc., and regularly paid incentive, production and shift bonuses.

The payroll concept does not include supplementary labour costs, operational costs or payments not related to the reference period. Thus the data do not include such items as employer's contributions to unemployment insurance, medical plans, workmen's compensation, other welfare plans, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, or bonuses paid at irregular or infrequent intervals. The treatment of vacation stamps is an exception. Although payment of vacation stamps does not relate to the reference period, these payments are included in the payroll data and the employees are considered to be absent without pay during the period they are on vacation.

Organization of Data

The Tabulation

Data tabulated for publication each month show the numbers of women, the number of employees of both sexes and weekly payrolls for the current and preceding month. The statistics first published for each month are preliminary; re-tabulation of the data in the succeeding month permits incorporation of corrections, retroactive pay for one month and data received too late for inclusion in the first tabulation. Data tabulated but not published are available on request provided the secrecy requirements of the Statistics Act are met.

The data are classified by industrial and geographic units and various averages, aggregates and index numbers are calculated.

Industrial Classification

All reporting establishments are assigned to an industrial class on the basis of their principal activity. If an establishment is engaged in a number of different industrial activities, its principal activity is determined by the net value added by these activities, or, where this is not possible, by the gross revenue obtained from the different activities. When an establishment has very mixed activities, it is not necessarily shifted from industry to industry each time its principal activity changes.

A description of the various industries and groups of industries may be found in the "Standard Industrial Classification Manual," DBS Catalogue No. 12-501. The "SIC code" columns in the main tables refer to this manual. The tables contain a few groups not found in the S.I.C. These includes:

Industrial composite - The sum of the industries tabulated

Durable goods manufacturing - The sum of wood products, furniture and fixtures, primary metal industries, metal fabricating industries, machinery (except electrical), transportation equipment, electrical products, and non-metallic mineral products

Non-durable goods manufacturing - The sum of the remaining manufacturing industries

Building - The sum of general contractors and special trade contractors

Engineering - The sum of highways, bridges and streets and other construction

As well, the tables subdivide the synthetic textile industry into filament yarn and staple fibres, and spun yarn and fabrics.

Geographic Classification

Reporting establishments are assigned to a province and, where applicable, to an urban area. Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick are added together to give a figure for the Atlantic Region. Similarly Manitoba, Saskatchewan and Alberta are added together to give a figure for the Prairie Region. Establishments in the Yukon and Northwest Territories are excluded from provincial totals but are included in the Canada totals. For urban areas the Census of Population's "Metropolitan Area" definitions were used for the seventeen urban areas where they apply. The definitions used for other urban areas were based on a labour market concept; they usually include a main centre and surrounding territory. A list outlining the territory included in each of the tabulated urban areas is available from the Employment Section on request.

An establishment not located in a tabulated urban area or an establishment that has no fixed location such as certain transportation and construction establishments, is included in the provincial totals but is not assigned to an urban centre.

Index Numbers

Index numbers are calculated by dividing the current month's employment by one-twelfth of the total base period employment. The current employment consists of all employment reported by establishments that meet our size criteria in the current period. Base year employment consists of the employment of establishments that had 20 or more persons in any month of 1961.

Seasonally-adjusted index numbers remove from the employment indexes these regularly recurring fluctuations known as "seasonal variations". The adjusted index numbers thus approximate the trend, cycle, and irregular components of the time series. A variant of the Census Method II is used to calculate the seasonally-adjusted index numbers.

Other Calculations

The average weekly wages and salaries figures are obtained by dividing weekly payrolls by the number of paid employees, including part-time employees and casuals working more than the equivalent of one day a week. Annual statistics are calculated from the aggregate of the monthly data, not from monthly averages. The industrial composite figure for a given geographic unit is the aggregate of all data tabulated for that area.

Larger Firm Employment as a Percentage of Total Estimated Employment, by Industry Division,
for Canada and Provinces, 1966 Annual Averages(1)

Industry	Canada	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.
